Reviews

This publication will be worth purchasing. It really is written in simple terms instead of difficult to understand. It has been designed in an exceptionally simple way and is particularly only right after I finished reading this ebook in which basically modified me, alter the way I believe.

Input: The required input parameters are station separation, station heights, and wavelength. Limitations: The program accounts for reflection, refraction, diffraction, but not tropospheric scatter or ionosphere refraction. It also assumes perfect conductivity. Current Status: The published version assumes a 4 3 earth; other earth factors can be obtained by scaling the distances and the wavelength. The in-house version has an input for earth factor.
