Excerpt: .time stir it thoroughly; the steam pressure is so adjusted, it will be unable to overcome the increased resistance, two-thirds of the contents of the kettle having become crystallized. The hood is then removed, the outlet at the bottom opened, and the liquid lead allowed to drain from the crystals, which are retained by the strainer. The liquid lead is transferred to one of the auxiliary melting pots, and the crystals may be charged at once into the second for fusion with a further amount of base bullion of the same tenor, i. e., silver contents, or set aside for treatment at some more convenient time. The operation is then repeated and base bullion of all values is thus separated in the one crystallizing kettle, care being taken, of course, to avoid confusion of lots of different values. The operation is accomplished much more...
