

Foundations of Computation Theory

Filesize: 4.12 MB

Reviews

This pdf is indeed gripping and interesting. It is definitely simplistic but shocks within the 50 percent of your book. Once you begin to read the book, it is extremely difficult to leave it before concluding.
(Michael Spinka)

FOUNDATIONS OF COMPUTATION THEORY

[DOWNLOAD](#)

Springer Aug 1983, 1983. Taschenbuch. Book Condition: Neu. 235x155x28 mm. This item is printed on demand - Print on Demand Titel. Neuware - Experiments, powerdomains and fully abstract models for applicative multiprogramming.- Deterministic dynamic logic of recursive programs is weaker than dynamic logic.- Reversal-bounded and visit-bounded realtime computations.- Input-driven languages are recognized in $\log n$ space.- How to search in history.- Constructive mathematics as a programming logic I: Some principles of theory.- The classification of problems which have fast parallel algorithms.- A fair calculus of communicating systems.- Two way finite state generators.- A complete set of axioms for a theory of communicating sequential processes.- The consensus problem in unreliable distributed systems (a brief survey).- Methods in the analysis of algorithms : Evaluations of a recursive partitioning process.- Space and reversal complexity of probabilistic one-way turing machines.- Pseudorandom number generation and space complexity.- Recurring dominoes: Making the highly undecidable highly understandable (preliminary report).- Propositional dynamic logic of flowcharts.- Fast triangulation of simple polygons.- On containment problems for finite-turn languages.- On languages generated by semigroups.- Aspects of programs with finite modes.- Estimating a probability using finite memory.- The greedy and Delaunay triangulations are not bad in the average case and minimum weight geometric triangulation of multi-connected polygons is NP-complete.- Decision problems for exponential rings: The p -adic case.- Functional behavior of nondeterministic programs.- A single source shortest path algorithm for graphs with separators.- Isomorphism testing and canonical forms for k -contractable graphs (A generalization of bounded valence and bounded genus).- Finding dominators.- Characterizing composable of abstract implementations.- Propositional logics of programs: New directions.- A new probabilistic model for the study of algorithmic properties of random graph problems.- On diagonalization methods and the structure of language classes.- A new solution for the Byzantine generals problem.- Modular decomposition of automata (survey).- A kernel language for algebraic...
